

Now Is the Time for Next-Generation Data Protection

NO MATTER WHAT YOU DO, your business, your company, your customers, even your industry is likely to be affected by important changes in data protection.

Consider the key trends: the quantity of data businesses are generating is growing exponentially; the importance of that continuously generated data is also growing exponentially; and the near-constant threat to that data from multiple areas. At the intersection of these trends is the data protection market.

ServerSafe from NetMass is a next-generation data protection service that is superior to tape-based technologies of the past as well as other D2D backup solutions.

ServerSafe offers an easy-to-manage data protection service that uses online backup technologies to protect your critical data. ServerSafe combines enterprise quality backup software, our internet overlay network, and world-class data centers to give you state-of-the-art data protection at an affordable price. Just install the ServerSafe DS-Client software on one networked computer, workstation, or server (no need to install software on each computer you need to back up), and you can back up and restore data across your network.

Using the DS-Client, your data is compressed, encrypted, and sent over the internet to our offsite data centers so your information is safe, secure, and available for recovery whenever you need it. ServerSafe remote backup offers automatic and unattended backups for data environments ranging from standalone PCs to enterprise-wide LANs and WANs.

Restoring lost or corrupt data is easy, whether it's a single email or an entire server. And, since ServerSafe is a total data protection service, you only pay for the data you plan to store offsite.

With ServerSafe, you benefit from:

- Easy backup and easy restore process
- Automated offsite protection
- One complete solution
- Controlled monthly costs
- Increased compliance with newer rules and mandates

ServerSafe offers advanced data protection that is superior to tape-based backup and other D2D solutions. ServerSafe addresses the many issues and challenges critical for a total data protection system, such as:

- Centralized, company-wide data protection
- Shorter backup windows and quicker recovery times
- Backup for heterogeneous application environments
- Multiple machine types and disperse data
- End-to-end data security
- 24/7 access

FOR IMMEDIATE RELEASE

About NetMass. NetMass, the safe data company, provides companies of all sizes highly secure and reliable remote backup solutions. Leveraging the efficiencies of the Internet, the company's software-based data backup service has been helping organizations realize secure offsite data protection, business continuity and regulatory compliance since 1998. With a robust lineup of products, NetMass delivers server backup, database backup, data storage, file sharing, remote access and disaster recovery services. NetMass, Inc. has offices in Dallas and Houston and has partners and clients around the world.
